

## ESA members receive a **62%** discount with YRC

### LTL Shipping Solutions

#### National & Regional

Enjoy seamless less-than-truckload (LTL) transportation throughout the United States, Canada, and Mexico with a portfolio of flexible, efficient solutions

#### Exhibit

Guarantee on all exhibit shipments inbound to show or advance warehouse at no additional charge

#### Expedited

Get it there fast with expedited and time-definite capabilities throughout North America, including to and from Canada with YRC Time-Critical™ or YRC Time-Advantage™

#### YRC Sealed Divider™

Ideal for products that are difficult or expensive to package, of high value, or need verifiable security throughout transit

## YRC is Committed to Environmental Sustainability.

At YRC, we strive to be good stewards of earth's natural resources. It's a commitment to our customers and employees that is taken seriously. We estimate the strategies we deploy to increase fuel efficiency and decrease emissions result in a reduction of approximately one million tons of CO2 annually. This lowers costs, which are passed on to our customers to give you a sustainable advantage.

### SmartWay Participation

YRC is a charter partner of the SmartWay voluntary emissions program and has twice received the SmartWay Excellence award. YRC Worldwide has been awarded the highest ranking from the EPA's SmartWay voluntary emissions program for five consecutive years. We continue to work with EPA officials to grow the SmartWay program through industry promotional opportunities.

### Service center networks optimized for efficiency

Shipments of various sizes and from diverse customers flow through our service centers that allow us to consolidate many small shipments into full loads effectively "car pooling" shipments. Our large scale service center network drastically reduces the percentage of our empty miles which is only one-third of the average truckload industry provider.

### Intermodal use

Intermodal utilization is a valuable emissions reduction strategy. This strategy is utilized when rail movement can meet required service delivery schedules for our customers' shipments. At the beginning and end of the intermodal movement, trailers move by truck, with the long distance in between transported by rail. We move approximately 300,000 units over 300 million miles by rail annually.

### On-site fueling stations

By operating our own fueling stations, we eliminate miles and idling. We also voluntarily buy biodiesel fuel in addition to buying it in states where it's mandated.

### Cleaner-Burning Engines And Hybrid Vehicles

Cleaner-burning engines improve fuel efficiency and reduce our carbon footprint. Approximately 300 new 2008 sleeper units and 800 new linehaul day cabs have been added to the fleet. Two low-emissions hybrid vehicles were added to the fleet in December 2008. Diesel-electric hybrid technology benefits include 30 percent savings in fuel economy, quieter operation, reduced CO2 emissions, and longer brake life.

### Speed governors

YRC Worldwide caps speed at 62/63 MPH. This long-term strategy has significant emissions reduction benefits. All linehaul and city pick up and delivery units are included.

### Engine-idling restrictions

We have self-imposed restrictions on power-unit idling to reduce emissions and save fuel. Many states and localities are seeing the benefit of this practice and beginning to issue idling restrictions. Power units burn 1 gallon of fuel per hour when idling. On-duty idling limited to 5–15 minutes. Overnight idling eliminated by YRC Worldwide companies by utilizing nearly 900,000 hotel room stays annually for drivers.

### Tire program

We have a system wide tire pressure program that yields significant fuel efficiency benefits. The program is audited by an outside party to ensure effectiveness. We are also introducing new fuel saving tires into the fleet to further increase efficiencies. Tires are recycled for future energy sources, playground mats and chips, landscaping mulch, and road construction materials. All used tires are given to EPA-registered recycling companies.

**Enroll online today at [Enrollhere.net](http://Enrollhere.net).** You don't have to choose between cost savings and a lower carbon footprint. Let YRC give you and your customers sustainability. To learn more, call 800.647.3061 or e-mail [associations@yrcw.com](mailto:associations@yrcw.com).
